

SpeedX

Innovative PCR Solutions,
Customized for Your Lab

Customized Solutions

Leverage the powerful PCR technologies at SpeedX, and enjoy a consultative approach to bespoke assay design. Whether filling a market need, differentiating your menu, or supporting a clinical trial, SpeedX has a solution for you!

**Benefit
from a suite of
technologies
and product
development
expertise**

SpeedX Capabilities

Collaborative Partnerships

Proven partnership history — with consistent and reliable outcomes

Leaders in PCR Multiplexing

Innovative patented technologies — tailor solutions to your needs

Experienced Developers

Support IVD and RUO — with strong clinical and regulatory experience

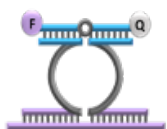

Reliable Manufacturers

Scale-up manufacturing expertise meeting strict QA

World Leading Technology — Innovative solutions for a range of applications

Universal Detection of DNA/RNA

PlexPCR®

Backbone of all SpeedX assays

Doubled Multiplexing Capabilities

PlexPlus®

Novel multiplexing for syndromic panels

Multiplex Mutation and SNP Detection

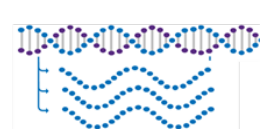

PlexPrime®

High multiplexing of clustered mutations

RNA Expression Analysis and Viability

InSignia®

Unique RNA Analysis capability

The SpeedX Advantage —

Experienced, Nimble, Cost-effective.

Your ideas.
Our solutions —
The Possibilities
are Endless!

Collaborative Partnership Process

Our systematic approach ensures clear communication, defined objectives and successful outcomes.

1 Project Initiation

We conduct a multi-departmental consultation covering your specific needs, challenges and objectives to identify the optimal approach.

2 Formalize Agreement

Collectively determine agreement parameters, including exclusivity and reagent supply volumes.

3 Assay Requirements

Work with our experienced and nimble R&D team to design your perfect assay. Using your specifications, we'll establish timelines, feasibility, and resource requirements to ensure a successful project.

4 Product Development and Validation

Experts in product development, we provide regular status updates, milestone review and collaborative problem solving. A comprehensive validation will ensure we meet or exceed your specifications.

5 World-class Service and Support

We provide comprehensive training, implementation support, and ongoing technical support as we scale up production capacity to keep up with your demand and quality requirements.

Interested in Custom Components?

Accelerate market entry with trusted SpeedX master mix and primers.

Possible configurations:

- STIs
- Enteric Pathogens
- Respiratory Viruses
- Antimicrobial Resistance (AMR)
- Customized components for your specific needs

Tailored Partnerships can include:

- Quality assurance with ISO 13485 and MDSAP compliance for component development and manufacturing
- Regulatory compliance maintenance
- Technical training

SpeedX custom products are supplied as individual components manufactured under ISO 13485 standards.
